

What You Will Learn

- ▶ Use properties of parallel lines.
- ▶ Prove theorems about parallel lines.
- ▶ Solve real-life problems.

Theorems

Theorem 3.1 Corresponding Angles Theorem

If two parallel lines are cut by a transversal, then the pairs of corresponding angles are congruent.

Examples In the diagram at the left, $\angle 2 \cong \angle 6$ and $\angle 3 \cong \angle 7$.

Proof Ex. 36, p. 180

Theorem 3.2 Alternate Interior Angles Theorem

If two parallel lines are cut by a transversal, then the pairs of alternate interior angles are congruent.

Examples In the diagram at the left, $\angle 3 \cong \angle 6$ and $\angle 4 \cong \angle 5$.

Proof Example 4, p. 134

Theorem 3.3 Alternate Exterior Angles Theorem

If two parallel lines are cut by a transversal, then the pairs of alternate exterior angles are congruent.

Examples In the diagram at the left, $\angle 1 \cong \angle 8$ and $\angle 2 \cong \angle 7$.

Proof Ex. 15, p. 136

Theorem 3.4 Consecutive Interior Angles Theorem

If two parallel lines are cut by a transversal, then the pairs of consecutive interior angles are supplementary.

Examples In the diagram at the left, $\angle 3$ and $\angle 5$ are supplementary, and $\angle 4$ and $\angle 6$ are supplementary.

Proof Ex. 16, p. 136

Vertical \angle s

\cong

Linear Pair

Supplementary \angle s

The measures of three of the numbered angles are 120° . Identify the angles. Explain your reasoning.

$$m\angle 4 = 120^\circ$$

$$m\angle 5 = 120^\circ$$

$$m\angle 8 = 120^\circ$$

Vertical \angle s

Corresponding \angle s OR Alt. Int. \angle s

Alt. Ext. \angle s OR Vert. \angle s Corr. \angle s

Find the value of x .

$x = 60$
 ~~$x = 65$~~

Corr. \angle s

Alt. Ext. \angle s

Use the diagram.

1. Given $m\angle 1 = 105^\circ$, find $m\angle 4$, $m\angle 5$, and $m\angle 8$. Tell which theorem you use in each case.

$m\angle 4 = 105^\circ$

Vert. \angle s

$m\angle 5 = 105^\circ$

Corr. \angle s OR Alt. Int. \angle s

$m\angle 8 = 105$

Alt. Ext. \angle s OR Vert. \angle s OR Corr. \angle s

When sunlight enters a drop of rain, different colors of light leave the drop at different angles. This process is what makes a rainbow. For violet light, $m\angle 2 = 40^\circ$. What is $m\angle 1$? How do you know?

$m\angle 1 = 40^\circ$ Alt. Int. \angle s
